# **INTRODUCTION**

## **WHAT AND WHY ?**

A data warehouse is a large, central repository of data that is used to support business intelligence and decision-making processes. It is a system designed to store and manage data from various sources, such as transactional systems, operational databases, and other external sources.

The purpose of a data warehouse is to provide a single, unified view of data that is consistent and reliable. This allows organizations to analyze and extract insights from large amounts of data to support their decision-making processes. By storing historical data, a data warehouse enables organizations to identify trends and patterns over time, which can help in forecasting and planning.

Overall, a data warehouse plays a crucial role in helping organizations to leverage their data assets effectively, gain insights into their operations and customers, and make informed decisions.

## **PROBLEM STATEMENT**

Design a data warehouse for a milk marketing company akin to Amul with a well-defined STAR Schema, information package diagrams and clearly show the business queries implemented on the warehouse.

Structure, store and analyze data associated with :

1. Procurement of milk
2. Manufacturing of milk products from the procured milk
3. Distribution of manufactured milk products to :
  - a. Dedicated company outlets
  - b. Milk products distributors

## **BUSINESS REQUIREMENTS**

To extract strategic information such as :-

- 1.) Calculating net profit by considering losses incurred on unsold items.
- 2.) Calculating net profit that would have been yielded had all items that were manufactured were sold (What if? Analysis and Benchmarking).
- 3.) Determining which items sell the least at dedicated company outlets with respect to quantity, amount, profit generated.
- 4.) Calculating the profit earned at each store on a quarterly basis for a given year.
- 5.) Calculating the difference in quantities of all products produced and sold.
- 6.) Determining the top suppliers that provided the highest total quantity of milk in a given year.
- 7.) Determining which plants have the highest and lowest production quantity in a given year.

# INFORMATION PACKAGE

## DIAGRAMS

### Milk Procurement

Time	Location	Supplier	Procurement Product
Year	State	Name	Fat Content
Quarter	City	Address	Cost
Month	Pincode	Phone Number	Type
Date		Email	
Day Number			
<b>Facts</b> : Quantity, Procurement Cost			

### Milk Products Manufacturing

Time	Location	Plant	Product
Year	State	Name	Name
Quarter	City	Address	Type
Month	Pincode		Sub-type
Date			Selling Price
Day Number			Cost
			Shelf Life
<b>Facts</b> : Quantity, Manufacturing Cost			

## **Milk Products Distribution**

### **Dedicated Store Outlets**

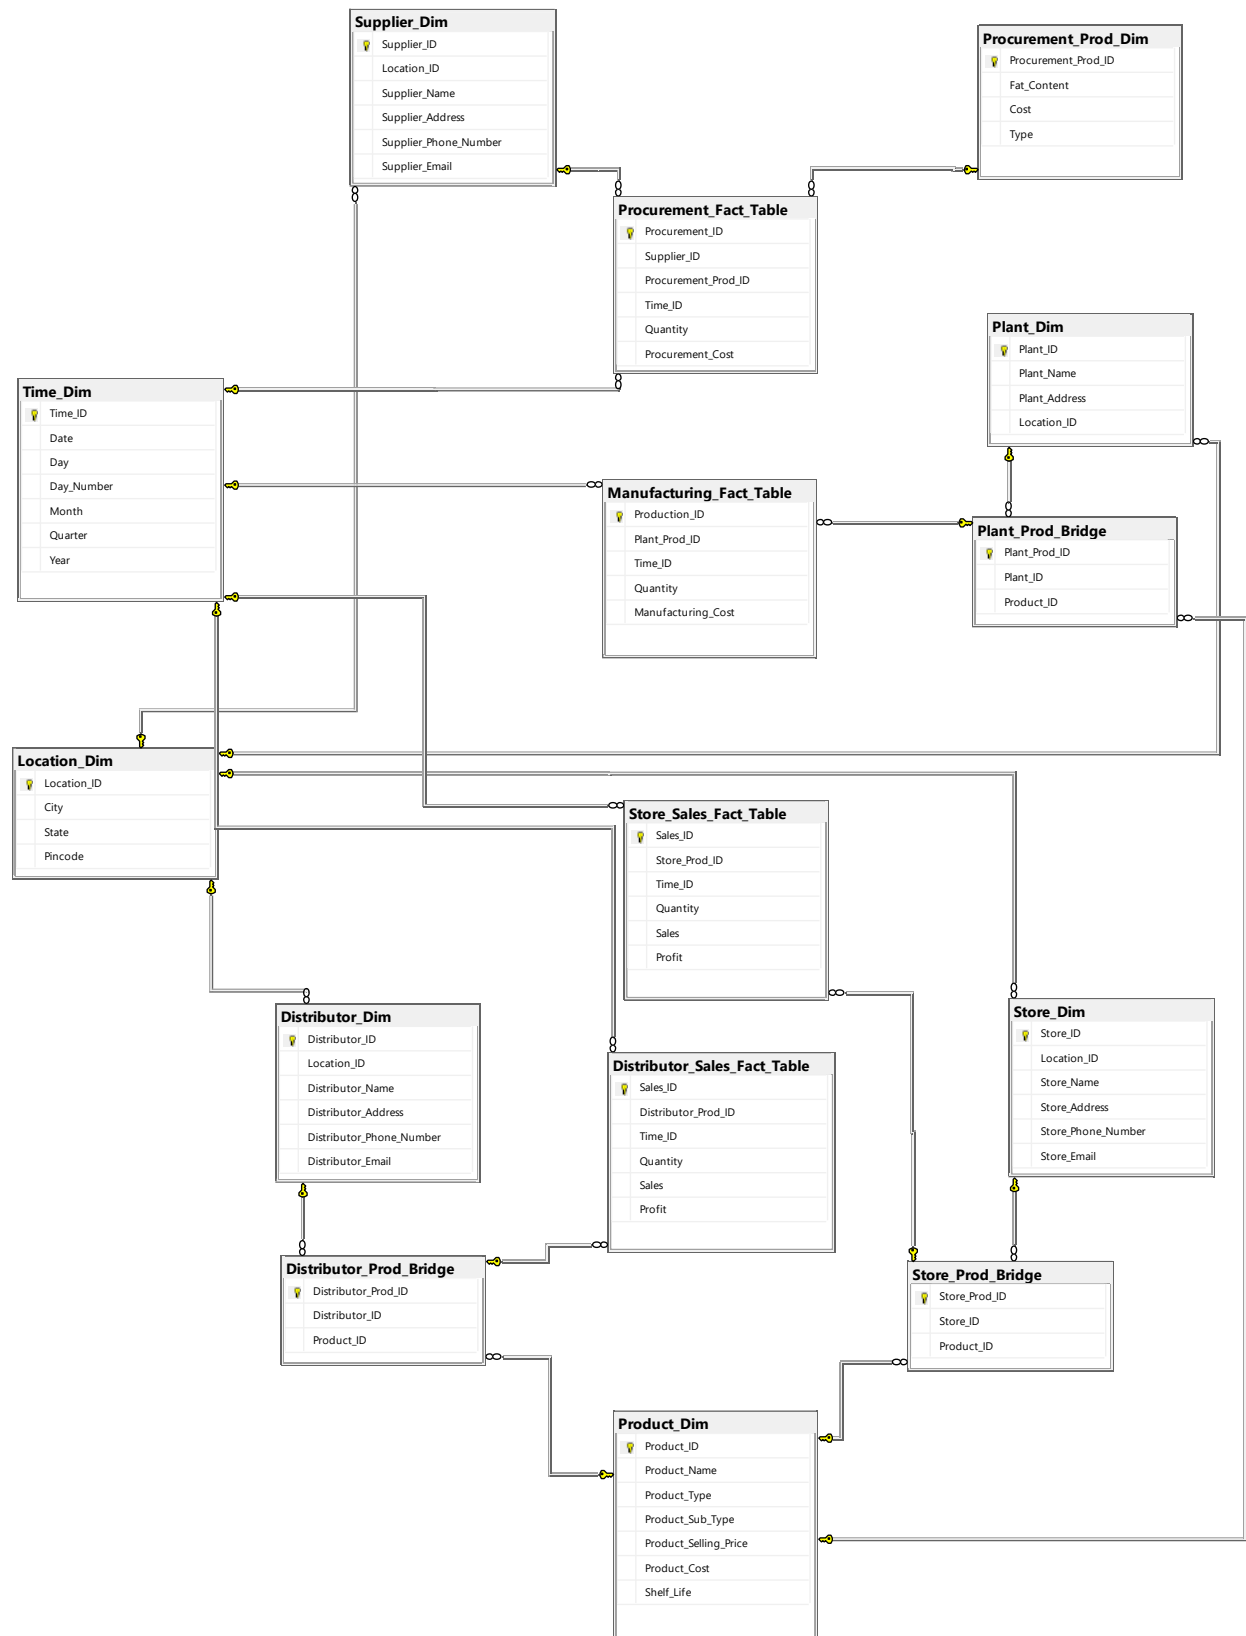

Time	Location	Store	Product
Year	State	Name	Name
Quarter	City	Address	Type
Month	Pincode	Phone Number	Sub-type
Date		Email	Selling Price
Day Number			Cost
			Shelf Life
<b>Facts</b> : Quantity, Sales, Profit			

### **Milk Products Distributors**

Time	Location	Distributor	Product
Year	State	Name	Name
Quarter	City	Address	Type
Month	Pincode	Phone Number	Sub-type
Date		Email	Selling Price
Day Number			Cost
			Shelf Life
<b>Facts</b> : Quantity, Sales, Profit			

# STAR SCHEMA

## Schema Diagram

## **Schema Definition**

LEGEND
Dimension Table
Fact Table
Bridge Table

### **Common Dimension Tables :-**

1. **Time\_Dim Table** : This table stores the dimension of time and is used in all fact tables. This table contains 2 years' worth of data (2021-22). Its columns are :
  - a. Time\_ID
  - b. Date
  - c. Day (Mon/Tue/Wed/Thu/Fri/Sat/Sun)
  - d. Day\_Number (1-730)
  - e. Month (1-12)
  - f. Quarter (1-4)
  - g. Year
  - h. Holiday\_Flag (1-Holiday, 0-Working Day)
2. **Location\_Dim Table** : This table stores the dimension of location and is used in all fact tables. This table contains 4 cities having 4 pincodes each. Its columns are :
  - a. Location\_ID
  - b. City
  - c. State
  - d. Pincode

### **1.) Milk Procurement Tables :-**

- a.) **Procurement\_Prod\_Dim Table** : This table stores the dimension of the raw material (milk in this case) and is used in the procurement fact table. This table contains 10 rows. Its columns are :
  - i.) Procurement\_Prod\_ID
  - ii.) Fat\_Content (in %)
  - iii.) Cost (per L)
  - iv.) Type (Cow/Buffalo)

**b.) Supplier\_Dim Table :** This table stores the dimension of the suppliers providing the raw material (milk in this case) and is used in the procurement fact table. This table contains 40 rows. Its columns are :

- i.) Supplier\_ID
- ii.) Location\_ID
- iii.) Supplier\_Name
- iv.) Supplier\_Address
- v.) Supplier\_Phone\_Number
- vi.) Supplier\_Email

**c.) Procurement\_Fact\_Table :** This table stores the facts associated with raw material (milk in this case) procurement. This table contains 200 rows. Its columns are :

- i.) Procurement\_ID
- ii.) Supplier\_ID
- iii.) Procurement\_Prod\_ID
- iv.) Time\_ID
- v.) Quantity (in L)
- vi.) Procurement\_Cost

**Table common for 2 & 3 :-**

**Product\_Dim Table :** This table stores the dimension of the products manufactured / to be manufactured from raw material. It is used in all bridge tables. This table contains 25 rows. Its columns are :

- i.) Product\_ID
- ii.) Product\_Name
- iii.) Product\_Type (Cow Milk/ Buffalo Milk /Chocolate/ Ice-Cream/Butter/Cheese/Cream/Ghee/Curd)
- iv.) Product\_Sub\_Type (Milk - Pasteurised, Skimmed, Toned ; Chocolate - Milk, Dark ; Ice-Cream : Cone, Family Pack, Cup ; Butter : Salted, Unsalted ; Cream : Fresh Cream , Ghee : Cow Ghee, Ghee , Curd : Curd, Sweet )
- v.) Product\_Selling\_Price
- vi.) Product\_Cost (Individual Product Cost)
- vii.) Shelf\_Life (In days)

## 2.) Manufacturing Tables :-

**a.) Plant\_Dim Table :** This table stores the dimension of the manufacturing plants processing the raw material into the final milk products to be sold.

This table contains 4 rows. Its columns are :

- i.) Plant\_ID
- ii.) Plant\_Name
- iii.) Plant\_Address
- iv.) Location\_ID

**b.) Plant\_Prod\_Bridge Table :** This bridge table stores the mapping between manufacturing plants and products indicating which products are manufactured at which manufacturing plants and is used in the manufacturing fact table. This table contains 100 rows. Its columns are :

- i.) Plant\_Prod\_ID
- ii.) Plant\_ID
- iii.) Product\_ID

**c.) Manufacturing\_Fact\_Table :** This table stores the facts associated with the manufacturing of milk products from raw material. This table contains 200 rows. Its columns are :

- i.) Production\_ID
- ii.) Plant\_Prod\_ID
- iii.) Time\_ID
- iv.) Quantity (Units)
- v.) Manufacturing\_Cost (Cost of total product amount produced at a plant)

## 3.) Distribution Tables :-

**a.) Store\_Dim Table :** This table stores the dimension of the dedicated company outlets where the manufactured milk products are sold and is used in the store sales fact table. This table contains 40 rows. Its columns are :

- i.) Store\_ID
- ii.) Location\_ID
- iii.) Store\_Name
- iv.) Store\_Address
- v.) Store\_Phone\_Number

- vi.) Store\_Email
- b.) **Distributor\_Dim Table** : This table stores the dimension of the Milk products distributors where the manufactured milk products are distributed and is used in the distributor sales fact table. This table contains 20 rows. Its columns are :
  - i.) Distributor\_ID
  - ii.) Location\_ID
  - iii.) Distributor\_Name
  - iv.) Distributor\_Address
  - v.) Distributor\_Phone\_Number
  - vi.) Distributor\_Email
- c.) **Store\_Prod\_Bridge Table** : This bridge table stores the mapping between company stores and products indicating which products are sold at which store and is used in the store sales fact table. This table contains 1000 rows. Its columns are :
  - i.) Store\_Prod-ID
  - ii.) Store\_ID
  - iii.) Product\_ID
- d.) **Distributor\_Prod\_Bridge Table** : This bridge table stores the mapping between distributors and products indicating which products are sold at which distributor and is used in the distributor sales fact table. This table contains 200 rows. Its columns are :
  - i.) Distributor\_Prod\_ID
  - ii.) Distributor\_ID
  - iii.) Product\_ID
- e.) **Store\_Sales\_Fact\_Table** : This table stores the facts associated with the sales of milk products from different company outlets. This table contains 200 rows. Its columns are :
  - i.) Sales\_ID
  - ii.) Store\_Prod\_ID
  - iii.) Time\_ID
  - iv.) Quantity (Units)
  - v.) Sales
  - vi.) Profit

f.) **Distributor\_Sales\_Fact\_Table** : This table stores the facts associated with the sales of milk products to different milk distributors. This table contains 400 rows. Its columns are :

- i.) Sales\_ID
- ii.) Distributor\_Prod\_ID
- iii.) Time\_ID
- iv.) Quantity (Units)
- v.) Sales
- vi.) Profit

# **BUSINESS QUERIES**

- 1. Calculate Net profit by subtracting losses on unsold items from total profit earned.**

## **Query :-**

```
DECLARE @Total_Sales DECIMAL(10,2);  
SET @Total_Sales = (SELECT SUM(Sales) from Store_Sales_Fact_Table) + (SELECT  
SUM(Sales) from Distributor_Sales_Fact_Table)
```

– Manufacturing cost involves the costs associated with both sold and unsold items as all items were manufactured prior to distribution

```
DECLARE @Total_Manufacturing_Cost DECIMAL(10,2);  
SET @Total_Manufacturing_Cost = (SELECT SUM(Manufacturing_Cost) from  
Manufacturing_Fact_Table)
```

– Subtracting sales and manufacturing cost will also take the manufacturing costs associated with unsold items into account

```
SELECT @Total_Sales-@Total_Manufacturing_Cost AS 'Net Profit'
```

## **Output :-**

	Net Profit
1	4752803.00

- 2. Calculate Net profit that would have been yielded had all items that were manufactured were sold (What if? Analysis and Benchmarking).**

## **Query :-**

```
/* CREATING TEMPORARY TABLE :- */
```

```
SELECT MFT.Quantity * PD.Product_Selling_Price AS Benchmark_Sales INTO  
#TEMP_TABLE FROM Manufacturing_Fact_Table MFT INNER JOIN  
Plant_Prod_Bridge PPB ON MFT.Plant_Prod_ID = PPB.Plant_Prod_ID  
INNER JOIN Product_Dim PD ON PD.Product_ID = PPB.Product_ID
```

```
DECLARE @Total_Sales_Benchmark DECIMAL(10,2);  
SET @Total_Sales_Benchmark = (SELECT SUM(Benchmark_Sales) from  
#TEMP_TABLE)
```

– Manufacturing cost involves the costs associated with both sold and unsold items as all items were manufactured prior to distribution  
 DECLARE @Total\_Manufacturing\_Cost DECIMAL(10,2);  
 SET @Total\_Manufacturing\_Cost = (SELECT SUM(Manufacturing\_Cost) from Manufacturing\_Fact\_Table)

– Subtracting sales and manufacturing cost will also take the manufacturing costs associated with unsold items into account  
 SELECT @Total\_Sales\_Benchmark-@Total\_Manufacturing\_Cost AS 'Net Profit (Benchmark)'

**Output :-**

	Net Profit (Benchmark)
1	11214400.00

**3. Calculate Net profit by subtracting losses on unsold items from total profit earned per year.**

**Query :-**

```
/* CREATING TEMPORARY TABLE FOR STORES :- */
SELECT SFT.Sales,TD.Year INTO #TEMP_TABLE_STORE_YEARS FROM
Store_Sales_Fact_Table SFT INNER JOIN Time_Dim TD ON SFT.Time_ID=TD.Time_ID
SELECT SUM(Sales) AS 'Yearly Sales',Year INTO
#TEMP_TABLE_YEARLY_STORE_SALES FROM #TEMP_TABLE_STORE_YEARS
GROUP BY Year
```

```
/* CREATING TEMPORARY TABLE FOR DISTRIBUTORS :- */
SELECT SFT.Sales,TD.Year INTO #TEMP_TABLE_DISTRIBUTOR_YEARS FROM
Distributor_Sales_Fact_Table SFT INNER JOIN Time_Dim TD ON
SFT.Time_ID=TD.Time_ID
SELECT SUM(Sales) AS 'Yearly Sales',Year INTO
#TEMP_TABLE_YEARLY_DISTRIBUTOR_SALES FROM
#TEMP_TABLE_DISTRIBUTOR_YEARS GROUP BY Year
```

```
/* CREATING TEMPORARY TABLE FOR SUM :- */
SELECT Year, SUM([Yearly Sales]) AS TotalSales INTO
#TEMP_TABLE_YEARLY_TOTAL_SALES
FROM (
  SELECT Year, [Yearly Sales]
  FROM #TEMP_TABLE_YEARLY_DISTRIBUTOR_SALES
  UNION ALL
  SELECT Year, [Yearly Sales]
  FROM #TEMP_TABLE_YEARLY_STORE_SALES
) AS CombinedSales
GROUP BY Year;
```

```
/* CREATING TEMPORARY TABLE FOR MANUFACTURING COST :- */
```

```
SELECT MFT.Manufacturing_Cost,TD.Year INTO #TEMP_TABLE_COST_YEARS FROM
Manufacturing_Fact_Table MFT INNER JOIN Time_Dim TD ON
MFT.Time_ID=TD.Time_ID
SELECT SUM(Manufacturing_Cost) AS 'Yearly Cost',Year INTO
#TEMP_TABLE_YEARLY_COST FROM #TEMP_TABLE_COST_YEARS GROUP BY Year
```

```
SELECT t1.Year, (t1.TotalSales - t2.[Yearly Cost]) AS 'Difference'
FROM #TEMP_TABLE_YEARLY_TOTAL_SALES t1
INNER JOIN #TEMP_TABLE_YEARLY_COST t2 ON t1.Year = t2.Year
```

#### **Output :-**

	Year	Difference
1	2021	4200632.00
2	2022	552171.00

- 4. See which items sell the least at stores with respect to :-**
- Quantity**
  - Amount**
  - Profit Generated**

#### **Queries :-**

–a.) Quantity

```
SELECT PD.Product_Name, SUM(SFT.Quantity) AS Total_Sales_in_Units FROM
Store_Sales_Fact_Table SFT INNER JOIN Store_Prod_Bridge SB ON
SB.Store_Prod_ID = SFT.Store_Prod_ID INNER JOIN Product_Dim PD ON
SB.Product_ID = PD.Product_ID GROUP BY Product_Name ORDER BY
Total_Sales_in_Units ASC;
```

–b.) Amount

```
SELECT PD.Product_Name, SUM(SFT.Sales) AS Total_Sales_in_INR FROM
Store_Sales_Fact_Table SFT INNER JOIN Store_Prod_Bridge SB ON
SB.Store_Prod_ID = SFT.Store_Prod_ID INNER JOIN Product_Dim PD ON
SB.Product_ID = PD.Product_ID GROUP BY Product_Name ORDER BY
Total_Sales_in_INR ASC;
```

–c.) Profit Generated

```
SELECT PD.Product_Name, SUM(SFT.Profit) AS Total_Profit_in_INR FROM
Store_Sales_Fact_Table SFT INNER JOIN Store_Prod_Bridge SB ON
SB.Store_Prod_ID = SFT.Store_Prod_ID INNER JOIN Product_Dim PD ON
SB.Product_ID = PD.Product_ID GROUP BY Product_Name ORDER BY
Total_Profit_in_INR ASC;
```

#### **Outputs :-**

## 7. Determine the top 5 suppliers that provided the highest total quantity of products in 2022.

### Query :-

```

SELECT TOP 5
    Supplier_Name,
    SUM(Quantity) AS Total_Quantity
FROM Procurement_Fact_Table
JOIN Supplier_Dim ON Procurement_Fact_Table.Supplier_ID =
Supplier_Dim.Supplier_ID INNER JOIN Time_Dim TD ON
Procurement_Fact_Table.Time_ID = TD.Time_ID

```

WHERE TD.Year = 2022  
 GROUP BY Supplier\_Name  
 ORDER BY 2 DESC;

**Output :-**

	Supplier_Name	Total_Quantity
1	Anjali Milk Suppliers	30300
2	Arti Milk Suppliers	26400
3	Geeta Milk Suppliers	26100
4	Jayant Milk Suppliers	24150
5	Rohit Milk Suppliers	18300

**8. Which plant has the highest and lowest production quantity in 2021?**

**Query :-**

```
SELECT TOP 1
  Plant_Prod_Bridge.Plant_ID,
  SUM(Manufacturing_Fact_Table.Quantity) AS Total_Quantity
FROM Manufacturing_Fact_Table
JOIN Plant_Prod_Bridge ON Manufacturing_Fact_Table.Plant_Prod_ID =
Plant_Prod_Bridge.Plant_Prod_ID
JOIN Time_Dim ON Manufacturing_Fact_Table.Time_ID = Time_Dim.Time_ID
WHERE Time_Dim.Year = 2021
GROUP BY Plant_Prod_Bridge.Plant_ID
ORDER BY Total_Quantity DESC; -- plant with highest production quantity
```

```
SELECT TOP 1
  Plant_Prod_Bridge.Plant_ID,
  SUM(Manufacturing_Fact_Table.Quantity) AS Total_Quantity
FROM Manufacturing_Fact_Table
JOIN Plant_Prod_Bridge ON Manufacturing_Fact_Table.Plant_Prod_ID =
Plant_Prod_Bridge.Plant_Prod_ID
JOIN Time_Dim ON Manufacturing_Fact_Table.Time_ID = Time_Dim.Time_ID
WHERE Time_Dim.Year = 2021
GROUP BY Plant_Prod_Bridge.Plant_ID
ORDER BY Total_Quantity ASC; -- plant with lowest production quantity
```

**Output :-**

	Plant_ID	Total_Quantity		Plant_ID	Total_Quantity
1	4	116000	1	1	51900
